Clotilde Péan
Head of the WGI Technical Support Unit, IPCC

Dear Ms Péan,

Climate science only changes decisions when people can understand it, trust it and use it. Throughout 2025, while traveling in South America, I walked up to Vinicunca in the Peruvian Andes. The mountain is known for its colors, but what stayed with me was the people working the trail, leading their horses and alpacas past bare rock beneath snow-capped peaks. I photographed and wrote about it for my personal project, which can be accessed through *field/notes*, and came home with questions I could not answer: what the science says about that retreat, and what it means for the families who live there.

That gap is what I want to work on. My master's in African Studies with a climate and resilience focus, my fieldwork in Kenya and my time at the World Meteorological Organization (WMO), which co-established the IPCC, gave me the background. This role would let me use it to help the WGI TSU communicate its findings to audiences who will never read a full assessment.

My communications experience is rooted in design, digital strategy, workflow engineering, and event execution. As an independent consultant, I engineer automated workflows, optimize content management systems, and advise organizations on data integrity and digital communication strategy. At the UNHCR Global Protection Cluster, I led end-to-end visual production for key toolkits, campaign videos, and flagship reports, while designing a content strategy that grew organic LinkedIn followers by 109.7% and scaled audience engagement over six months. I also served as a focal point for digital knowledge platforms, curating complex field protection guidance into accessible online formats. At the WMO, I co-led staff change communications for a major intranet migration and leveraged user participation analytics to restructure Communities of Practice. At the Local Government Academy, I managed a high-frequency online knowledge series on COVID-19 response, coordinating national experts across three to four live sessions weekly.

While my core professional background is rooted in digital content design, platform architecture, and large-scale event coordination rather than day-to-day media relations, and my French is currently at an A2 level, I am eager to expand into media engagement alongside your team and the IPCC Communications Action Team. More importantly, I am ready to hit the ground running by delivering what I already excel at: turning complex material into clear visuals, short texts, and engaging sessions that people can follow. *To demonstrate this, I have enclosed a plain-language explainer of a published WGI finding and a mock press release for your review.*

I am ready to relocate to France and to travel internationally for the role. Contact details for two referees are included with my application.

Thank you for considering my application. I would welcome the chance to talk with you.

Sincerely,

Timothy Earl Mateo Castillon
